Solution 1: Delete Temporary Internet Files From Your Windows

If any temporary internet files are stored in your Windows operating device, then immediately delete them. With this, your Quicken Error OL-301-A will get resolved. Hence, perform the given guides:

- First of all, press "Windows + R" keys altogether to bring-up the Run dialog box or you can give a right click on "Start" button and select "Run" option to open it

- Then, you have to type “Control Panel” under the search box and press “OK” button or else hit “Enter” key
- After that, in the next window, tap on “Network and Internet” tab
- Then after, hit on “Internet Options”
- Doing this, Internet Properties window will pop-up
- There, you have to click on “Delete” button under the Browsing history section
- At the end, click “Delete” button to permanently delete the temporary files from your Windows Desktop

Alternative Ways To Delete Temporary Internet Files

- First, give a right-click on “Start” button and then go to “File Explorer” tab
- Click on “This PC” option and then right-tap on C:drive to select Properties option
- Then, click “Disk Cleanup”
- Give a check-mark to the option “Temporary Internet Files” and uncheck the rest of listed options
- Now, click “OK” and “Delete Files” tab

By performing these above steps, the temporary internet files will surely be deleted. If this doesn't fix the [Quicken Error code OL-301-A](#), go ahead with the next solution.

Solution 2: Conduct Full Malware Scan Of Your Computer

There are possibilities that your system is infected with threats or viruses because of which you face Quicken Error OL-301-A. Therefore, run Windows system file checker on your PC to remove the viruses and make better performance of your Quicken related files. Here is how to do such thing:

- First, place a right-click on “Start” button and select “Run” option
- Type “CMD” into the search box and do not hit “Enter” or OK tab
- First hold “Ctrl + Shift” keys simultaneously and then press OK button
- Click “Yes” in the next screen
- In the next, the Command Prompt will pop-up
- Afterwards, type “sfc/scannow” and hit “Enter” key
- Doing this, the verification of system files will begin
- Once the scanning process gets completed, it will show you the status at the end or you can follow on-screen instructions

Alternative Method To Run Windows System File Checker

Run the command prompt as administrator for Windows System File Checker (“sfc/scannow”). Here is how to do so:

- Open Run dialog box on your Windows screen and type CMD into the search box
- Move your cursor to Command Prompt tab and give a right click on it
- Select “Run as Administrator”
- Click “Yes”
- The black window will pop-up
- Type “sfc/scannow” and hit “Enter”
- Doing so verification of system files will begin. This process may take several time so have patience
- Once the scanning process completes, the status will display at the end or you can follow on-screen instructions

If still Quicken Error OL-301-A appears, go to the next solution.
